

My first semester in IT studies has been a mix of new experiences, challenges, and learning opportunities. In this report, I will discuss how the first semester of my studies will affect the second one. I will evaluate myself to see if I made the right choice in choosing this course or not. I will also share my feelings about the current situation of the course and whether I will continue doing it, along with the reasons behind my decision.

How the First Semester Would Impact the Second One

The skills I learned in the first semester, such as database management and basic programming like building websites and PHP, will be important and essential for the next semester. This semester helped me understand what to expect in the next semester regarding the structure and quality of the course, as well as what I need to do. However, I realized that compared to programming lessons, documentation and project work are a bit more challenging and confusing. These tasks require different skills, like planning in a very structured way, which can make me feel less interested in doing them. I realize that my experience from my previous education taught me to focus more on getting results than on the steps to get there. This might be why I find it hard to stay interested in tasks like documentation.

I plan to spend more time practicing the necessary skills for documentation and ask for more feedback from teachers and teammates so I can improve my skills and feel more confident.

Did I Make the Right Choice?

When I chose IT, I was interested and curious about working in this field because it is always growing and evolving. This means I will always have fresh and appealing opportunities in front of me. I still feel the same way, and my enjoyment of attending classes, completing different assignments, and working in a team for projects proves that I made the right choice. On a deeper level, I strongly believe technology can solve problems and make our lives easier. There were moments when I found some assignments challenging, but even in those moments, I was excited to find solutions.

Finding solution and being passionate about learning its not just about IT its part of who I am and I always find it very crucial that if you want to enjoy every day of your life you have to work in a field that you are interested in and it matches your personalities and values.

How Am I Doing So Far?

So far, my progress has been great. I passed all of my exams with high grades and received positive feedback from my teachers and mentor. In the family and culture I come from, achieving high grades in exams and earning the respect of teachers is considered very important. However, if I want to be more specific, I see myself getting frustrated and overwhelmed when things do not go as planned. For example, in the second period, there was a huge misunderstanding and disorganization.

I noticed that with documentation and some other project assignments, I had to do more than expected just to get a clear overview of what was being asked. This left me with less time for the actual work. I felt overwhelmed at times, but this experience taught me that tough situations can happen. What's important is to share your feelings with others and express your concerns respectfully to avoid any conflict. Overall, I'm proud of what I've achieved so far, even though there's still room to grow.

Will I Continue?

Yes, I've decided to continue with my IT studies. This decision comes from thinking carefully about my experiences and future goals. I believe that staying determined and being flexible are important for success, and my IT studies have helped me build these skills. I've worked hard to keep up with my studies, and I feel motivated by the idea of building a career in IT. Deep down, I know that I'm passionate about technology and enjoy learning new things, even when it's hard.

Why Am I Continuing?

Continuing makes sense because I'm enjoying my time and learning a lot from the challenges. I decided to continue my IT studies because it matches my values and goals. I enjoy learning and improving, even when things are difficult, because I see challenges as chances to grow stronger and build my skills. The way I was raised, with a focus on hard work and lifelong learning, has strongly influenced how I see things. I'm also able to identify my weaknesses, work on fixing them, and build a future in a field that I truly enjoy.
