

Proof of Completion: PDP Goal 1 (Vue.js)

Project: Centralized Activity Agenda

This document serves as formal evidence of completion for my first Personal Development Plan (PDP) goal: learning the Vue.js framework and applying it to a practical IT project.

As part of my independent study to improve my front-end development skills, I contributed to the development of the Centralized Activity Agenda platform alongside my project group. My efforts in translating my 7-hour Vue.js course into a functional web application are documented in our repository.

The source code, commits, and version history for this project are hosted on GitHub and can be reviewed via this [link](#).
